The Real Truth About Organic Strawberries

Certified organic strawberries aren't so organic after all. Although organic strawberries sell for 50% to 100% more than conventional berries, organic strawberries are fumigated with toxic chemicals, including [methyl bromide](#), at the beginning stages of their life-cycle.

Methyl bromide, is used to [sterilize the soil](#) before strawberries are planted. It's not sprayed on the fruit. It's a soil fumigant that kills just about everything it touches. Many hybridized seed varieties have been created that can only grow in sterile soil.
